Our agency was born in 1990 from the entrepreneurial initiative of its members, who combining the heritage of their professional experiences have given shape to a modern idea of making insurance.

The organizational structure of the agency consists of highly qualified personnel, who address their skills on process aimed at guaranteeing the highest quality of customer service both in the analysis of needs and in the assistance in the event of an accident. These attentions to quality of the offered services express themselves in the sharpness and correctness of relations with clients and with the companies represented by themselves..

**Our values**

The values of the agency are the same values of people working in it, transparency, efficiency and punctuality, that daily lived in the profession give safety, trust and serenity to our client.

**Our business**

The quality of our offered service is the main target of our activity and this is the reason why we have identified a monitoring method that allows us to use even higher quality standards. The main goal of our insurance agency is that of providing consulting service that are evident mainly in the following phases:

- risks identification and estimation
- formulation of the insurance project
- management of all the insurance issues, including the emergent ones too

**Our method**

The client is our principal and this is the reason why we act for his exclusive interest, within a transparent and correct relationship with the companies that we represent. Our method foresees a global consulting approach that aims to identify which are the economic risks burdening on the person or his asset. Once the areas to be preserved have been identified, a solution commensurate with the extent of the potential economic damage is formulated so that the client can free resources and investments that would otherwise be immobilized.

**Our expertise**

The in-depth knowledge of the client under the economic, professional and familiar point of view is the necessary condition for a correct study of his insurance needs. This allows to suggest solutions that allow the client to transmit the risks to the company or consciously manage the possible consequences.

**Our claim management**

The claim is for us the real test, its management is the yardstick through which all the job previously done is evaluated. This is the reason why we manage the claims of our clients as if they were our claims, without sparing commitment and dedication. We allocate our best resources to the claims management relying on devoted qualified internal resources and on external consultants with proven professionalism..
